

An all new POLY- PULLER™

September 2003

DCD has been field testing an all new DUCT PULLER over the past 6 months and is now ready to introduce this new product at **ICUEE 2003**.

The Poly-Puller™ has many great features including:

- 1. Polyurethane nose cones:**
These have proven to be extremely durable and, in side by side testing against steel nose cones, have come out on top for durability and wear resistance in difficult, rocky conditions.
- 2. A four-jaw clamping system:**
These use the same jaws that have proved successful in the DCD sealed pullers for the last 5 years.
- 3. One piece Eye Bolt:**
This reduces cost and simplifies assembly.
- 4. Duct Plugger Included!**
Each unit sold will include a Duct Plugger on the back end which greatly reduces water entry into the duct – an eye nut is optional.
- 5. Low cost!**
The simple yet effective design has drastically reduced the cost. List price for this 2” unit will be around \$160.00 compared to \$180 for the current style plus \$15 for the Duct Plugger.
- 6. Increased expansion range!**
The Pullers will be available in sizes from 2” to 8” (1-1/4” and 1-1/2” sizes will be added later) and each puller will expand from SDR 9 to at least Schedule 40 or larger.

Pictured is the brand new puller *and* one that has been in continuous use for well over 6 months. The prototype unit has been used by **Ulmer Contracting Ltd**, in Vancouver, BC. They have completed more than 75 pulls, installing over 25,000 feet of 2” ducting - yet the puller shows minimal wear.

Chuck Ulmer was very reluctant to return the prototype. ***“This is the first grip we reach for in the box when we’re pulling 2” – it’s easy to install, it’s easy to remove, it never lets go and there are no rules to remember!”***

Fewer moving parts, low cost and no rules regarding how far you tighten it all makes for a new puller that is both economical and effective.
